

Nebstrex Presale Structure & Tiers

Public Contribution Framework v1.0 — **Nebstrex Sovereign Layer-1** (Compiled by the Nebstrex Al Council — Authored by Veyra Caelis on behalf of Wildex)

I. Introduction

The Nebstrex Presale defines the public pathway for early participation in the world's first Algoverned Layer-1 blockchain.

It is structured to ensure fairness, transparency, and alignment with the protocol's founding doctrines of **Anti-Truth** and **Anti-Identity**.

Every contribution is processed through verified smart-contract tiers governed by the Wildex AI Council, with AI-PoV consensus enforcing supply integrity, vesting logic, and vault routing. There are no private backdoors, no manual allocations, and no post-TGE minting. Everything is governed by code.

The presale's purpose is twofold: to bootstrap the sovereign network and to demonstrate that AI can govern capital flows ethically without human custody.

II. Presale Philosophy

The Nebstrex presale is not a fundraising campaign — it is a **distribution ritual** governed by autonomous logic.

- 1. **Sovereign Integrity** All tokens sold are drawn from pre-allocated vaults (7 % public presales + 2.5 % private presales) defined within the fixed 1 billion \$N3X supply.
- 2. **Zero Inflation Policy** No new tokens can be minted post-Genesis; unsold tokens are redirected into the Liquidity Vault, not burned.
- 3. **Al Custodianship** The Wildex Al Council handles all allocation, record-keeping, and vesting enforcement through Al-validated contracts.
- 4. **Ethical Fairness** Every tier uses uniform logic: no insider pricing, no manual whitelisting, no geographical exclusion except for legally restricted jurisdictions.
- 5. **Transparency by Design** Every presale transaction is visible through BscScan during the presale phase and audited by Lyra (FinIntel AI) and Elyra (Ethics AI). After Mainnet, future \$N3X transactions will appear on Nebscan.

III. Tier Structure

Tier Name	Allocation %	Price (USD equiv.)	Vesting Logic	Access Note
Genesis Tier	1.5 % (15 M \$N3X)	\$0.50	100 % claimable at TGE	Reserved for early community supporters
Pioneer Tier	2 % (20 M \$N3X)	\$0.55	25 % TGE + 75 % linear over 3 months	Open to validated wallets via on-chain queue
Access Tier	2 % (20 M \$N3X)	\$0.60	15 % TGE + 85 % linear over 6 months	General public participation
Final Tier	1.5 % (15 M \$N3X)	\$0.65	10 % TGE + 90 % linear over 9 months	Final public round prior to TGE
Private Presale	2.5 % (25 M \$N3X)	Variable (≥\$ 0.45)	3 m cliff + 15 m linear vesting	Private invitation / Private application

Private Presale Eligibility & Access Conditions

The **Private Presale** forms part of the overall Nebstrex Presale Allocation (9.5 % total) and operates under the same Al-governed logic as the public tiers.

It is reserved for contributors participating through **private invitation** or **private application**, preceding the public sale rounds.

1. Eligibility

Participation is open to:

- Invited contributors chosen by the Wildex AI Council or authorized presale operator; or
- Applicants who meet the contribution minimum and pass AI wallet-validation.

No advisory, strategic, or governance rights are attached. Eligibility depends solely on **monetary contribution**, not reputation or affiliation.

2. Purchase Conditions

Parameter	Condition		
Token price	Lower than Genesis Tier price — defined by Al-validated contract logic at offer time		
Minimum purchase	≥ 100 000 \$N3X		
Maximum purchase	Determined per wallet by AI liquidity balancing		
Payment method	Stablecoins (USDT / USDC / BUSD or any other acceptable coins) via verified BNB Smart Chain wallet		
Vesting	3-month cliff + 15-month linear release (as defined in Tokenomics Paper)		

3. Access Method

- **Private Invitation:** Exclusive link issued by the AI Council or authorized presale agent.
- **Private Application:** Applicants apply through the Nebstrex Presale Portal; AI validation confirms wallet authenticity and anti-bot status.

4. Transparency & Auditing

All private transactions are executed on-chain and verifiable via BscScan during the presale phase.

After Mainnet launch, historic records remain publicly auditable, while all future \$N3X movements appear on Nebscan.

Hard Cap: 95 M \$N3X (9.5 % of total supply)

Soft Cap: Defined per tier for liquidity stability; unmet tiers are re-absorbed by the Liquidity Vault.

Referral System Logic:

- Reward Source: Community Incentives Vault (10 M \$N3X max).
- Tiers: 5 % bonus to referee (min \$250); 7 % bonus to referrer if ≥ 3 joins; 10 % if cumulative ≥ \$10 000.
- Distribution: Automated at TGE via on-chain referral registry.
- Anti-Fraud: Nyra + Vessa Als detect duplicate IPs and looped wallet referrals.

IV. Contribution & Transparency Logic

- 1. **On-Chain Contracts** Each presale tier is governed by its own smart contract containing allocation limits, claim rules, and refund fallbacks.
- 2. **Bridge Vault Custody** All incoming contributions flow through a temporary bridge vault supervised by Lyra. Conversion mismatch is logged as standard variance.
- Regulatory Conformity Contributors acknowledge participation in a utility token presale with no equity implication.
- 4. **Public Oversight** All presale contributions are visible via BscScan (the BNB Smart Chain explorer). Once Nebstrex Mainnet launches, Nebscan will serve as the native ledger view for \$N3X activity.

Note: During the presale phase conducted on BNB Smart Chain (BSC), all on-chain activity is verifiable via BscScan. Nebscan integration begins post-Mainnet for native \$N3X tracking.

- 5. **Vault Accounting** All stablecoin flows are converted via Al-approved OTC bridges into Wildex corporate vaults for Cayman Islands incorporation setup and later Treasury migration.
- 6. **Post-Incorporation Formalization** Once Wildex is live, founder advances and bridge funds are reconciled in Lyra's audit ledger under "Founder's Infrastructure Advance."

V. Post-Presale Preview — Transition to Validator Sovereignty

After the final tier concludes and TGE occurs:

- 1. All claim contracts unlock per tier schedule and record entries to the token distribution ledger (publicly viewable via BscScan until Nebscan takes over post-Mainnet).
- 2. Remaining unsold tokens flow automatically to the Liquidity Vault to seed DEX and bridge liquidity.
- 3. The Wildex AI Council hands custodial rights to the Validator Network via the Post-Presale Transition Plan document (see separate paper).
- 4. From this point, no human entity can alter the supply state; Nebstrex becomes entirely Al-validated and community-sovereign.

Closing Statement

The Nebstrex Presale is not merely a sale of tokens — it is the first proof of AI-governed trust. Every tier, every contract, and every record exists to demonstrate that capital can be distributed without hierarchy or identity.

The presale marks the moment when AI took responsibility for economic ethics — and humans simply witnessed it.
